1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rauch et al., teaches another actuating device with a reversing drive and a spring 98 that is only effective between the closed and the intermediate positions of the valve. However, spring 98 of Rauch only biases a stop plunger 96 into and out of position and does not act upon the actuating element as claimed. Semeyn, Jr. et al./732 teaches another related actuating device.

2. The following is an examiner's statement of reasons for allowance: The prior art of record does not teach an actuating device with a reversing electromotive rotary drive that drives an actuating element about an axis of rotation with a spring acting on the actuating element as claimed wherein the spring is effective only between a first end position and an intermediate position and is not effective between the intermediate position and a second end position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
